Qualifications and certifications

For years we have been setting up projects with local Administrations which implement their political and strategic priorities, making changes and responding to the expectations of local communities.

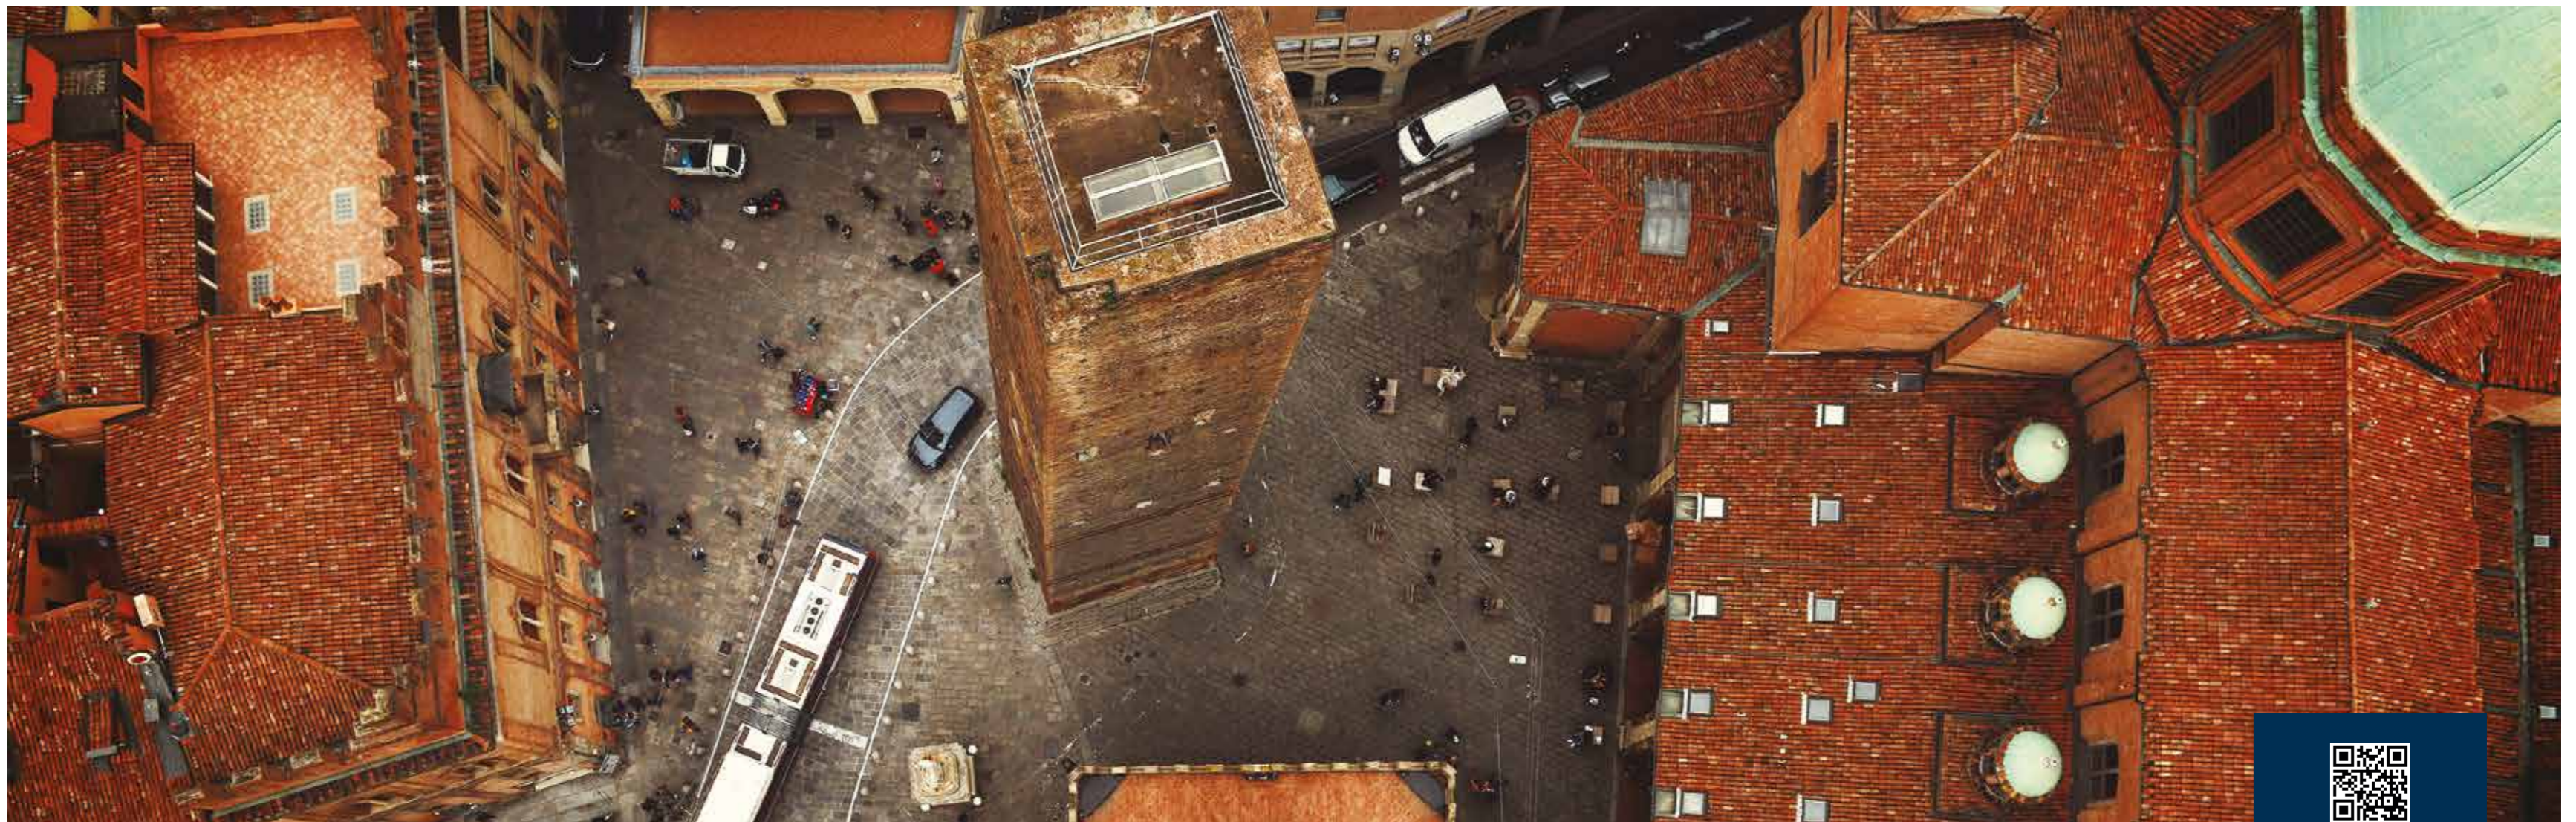

AUGMENTED CITY AND SMART GOVERNMENT

TECHNOLOGY, FINANCE AND SOLUTIONS AT THE SERVICE OF CITIZENS, LOCAL ECONOMY AND ENVIRONMENT

Municipia is part of the **Engineering Group**, the largest Italian Digital Transformation company with over 11,000 employees worldwide, 50 offices and more than a billion euro in annual revenues.

Municipia is the ideal partner for the **digital transformation** of about 1,000 cities of all sizes, for which we create innovative services through **private investments and absorption of the operational risk**.

Experience, reliability and innovative capabilities allow us to collaborate with municipalities throughout the world and to support local governments in implementing their urban strategies and transforming the Administration. The goal is to make the city more sustainable by improving public services, focusing on people.

Mission

We manage services for Authorities and their citizens, achieving greater levels of efficiency, effectiveness, transparency and sustainability through digital technology. We intervene with **public-private** partnerships and **project financing** formulas with investments and risks borne by us and participation in the benefits deriving from the increase in revenue and the decrease in costs. We add value to existing investments and technologies, making available our experience and the technological solutions of the Engineering Group. We intervene with vertical initiatives and with cross-cutting projects, improving the quality of life in the city and simplifying the relationship between public administrations and citizens.

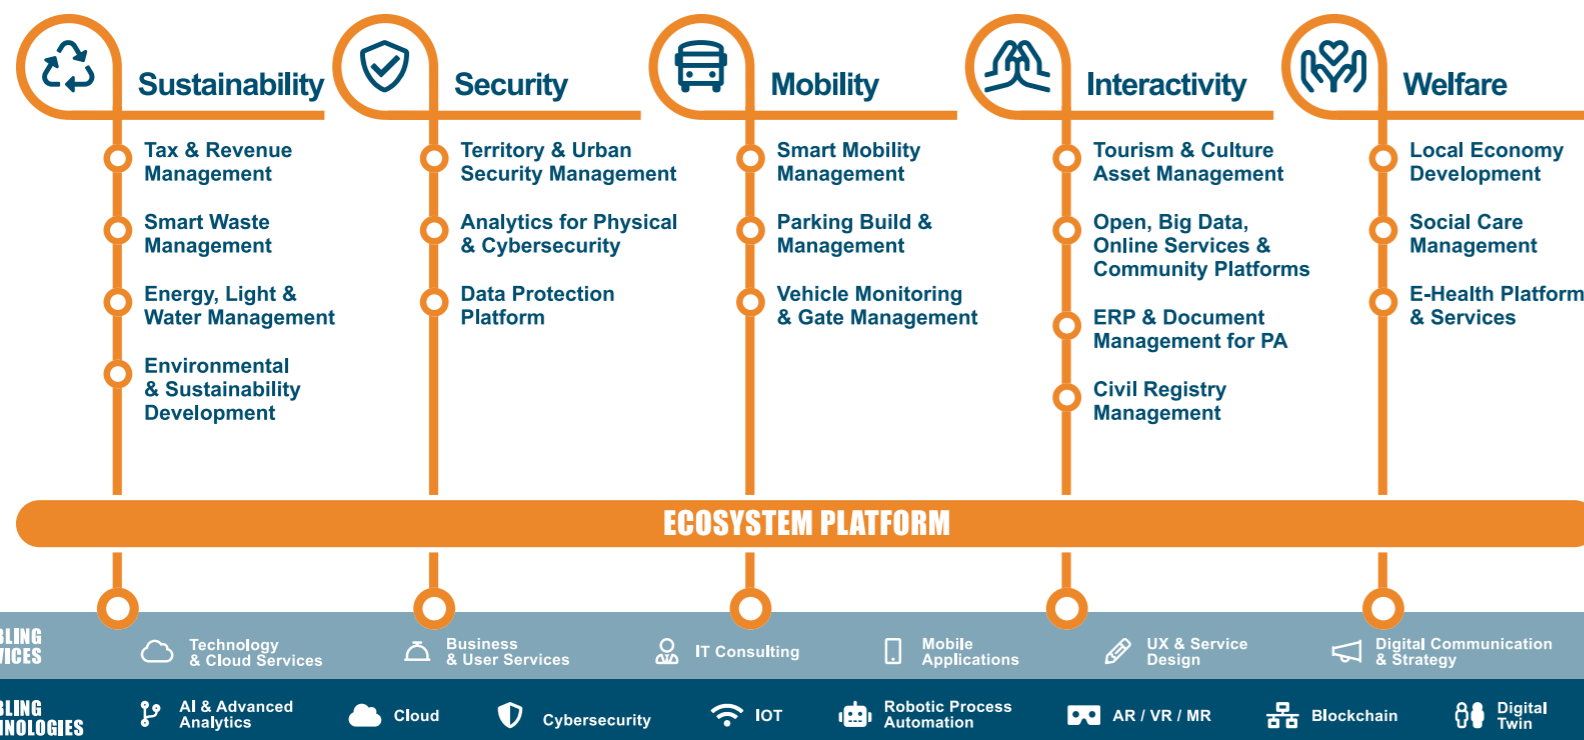

“We augment cities” by acting on:

- ▶ Financial sustainability
- ▶ Environmental sustainability
- ▶ Safety
- ▶ Mobility
- ▶ Welfare
- ▶ Interactivity

Through **public-private** partnership and **project financing**, **Municipia** generates capital, technology, skills and operational risk management in order to achieve the Administration's objectives.

PORTFOLIO MAP

Augmented City

Focus Digital Transformation

Municipia offers the **jEnte suite (in cloud according to the AGID - Agency for Digital Italy - guidelines)**, the simple, protected and customizable solution to rationalize the entire management of the local Administration and of its companies.

Digital Transformation

The suite is structured in **modules**; these are autonomous but can be integrated with one another and may be implemented at any time:

- ▶ General affairs
- ▶ Demographic services
- ▶ Financial services
- ▶ Property
- ▶ Human resources
- ▶ Taxes and charges
- ▶ Local Police
- ▶ Suap (One-stop business advisory center)
- ▶ Construction

This allows to **protect the investment** and to extend it over time to achieve maximum results.

“We support Administrations with specialized and dedicated resources. We have specialized domain, process, innovation and consulting skills supported by the Group Research Development laboratories. This is why we are the qualified partner to tackle today's technological and social challenges.”

Focus Smart Mobility

Municipia supplies **INES Cloud**, the platform used by many cities in Italy and abroad for a unified management of mobility and urban parking. This solution allows implementing **city mobility policies** (access, transit and parking rules, geographical areas of application, tariffs, transactions, digital, web and mobile sales channels) and operational processes (implementation and control of rules and services).

Smart Mobility

INES Cloud BSS

It is the support system for mobility business processes. It enables configuring any type of digital process required by municipal ordinances and to completely manage the sales cycle through the citizen's helpdesk or through the main digital channels.

INES Cloud OSS

It is the support system for mobility operational activities. Hardware independent, to unify the management of the various urban mobility field devices of different manufacturers: cameras, parking sensors, flow sensors, barriers, parking meters, automatic pay stations, LED displays, variable message panels, environmental sensors, on board units, AVM.

It is the first ecosystem for the integrated management of urban mobility which overcomes the fragmentation of existing silos systems, both hardware and software, and supports the integration of multiple technologies and applications in order to provide integrated, more effective and higher quality services.
