REQUIREMENT

By applying ICT to public services, local Authorities can **guarantee total accessibility to citizens** within the framework of innovation, of modernization of the public system but above all of greater transparency and simplification of all administrative procedures, with faster times and quicker and more secure methods of data transfer.

SOLUTION

jEnte in Cloud is the easy-to-use, secure and customizable solution to streamline the entire management of the local Authority and of its agencies, focused on objective-based management. The suite is structured in modules; these are autonomous but can be integrated with one another and may be implemented at any time. This allows to protect the investment and to extend it over time to achieve maximum results.

CENTRAL INFORMATION CORE

With the aim of integrating, enhancing and sharing, the **Central Information Core** (NIC) acts as an aggregating structure of the Authority's information assets. Thanks to this core, the different subsystems enhance their characteristics, integrate with each other and cooperate with external systems, ensuring the organization of a true Integrated Information System.

The NIC collects in the **Extended Population** archive the personal data of all residents and non-residents who have a relationship with the Authority and who are recorded in the various management modules, responding to the need for a Single Personal Database and ensuring a view by subject.

In the **Building Units** archive, it proposes a similar complete view but centered on the object.

The dashboard of the **Expected Revenues** of the Authority, through the overall view of credits, creates a true "Detailed Statement of Account" of the subject seen as a "Client" of the Administration: a centralized tool for managing planned revenues and for controlling payments.

MANAGEMENT AREA MODULES

The suite is organized in self-contained modules which share the core part from which they obtain common data, basic functions, interface and logics. Each module has its own database which integrates and specializes the core one, ensuring total coverage of all management areas.

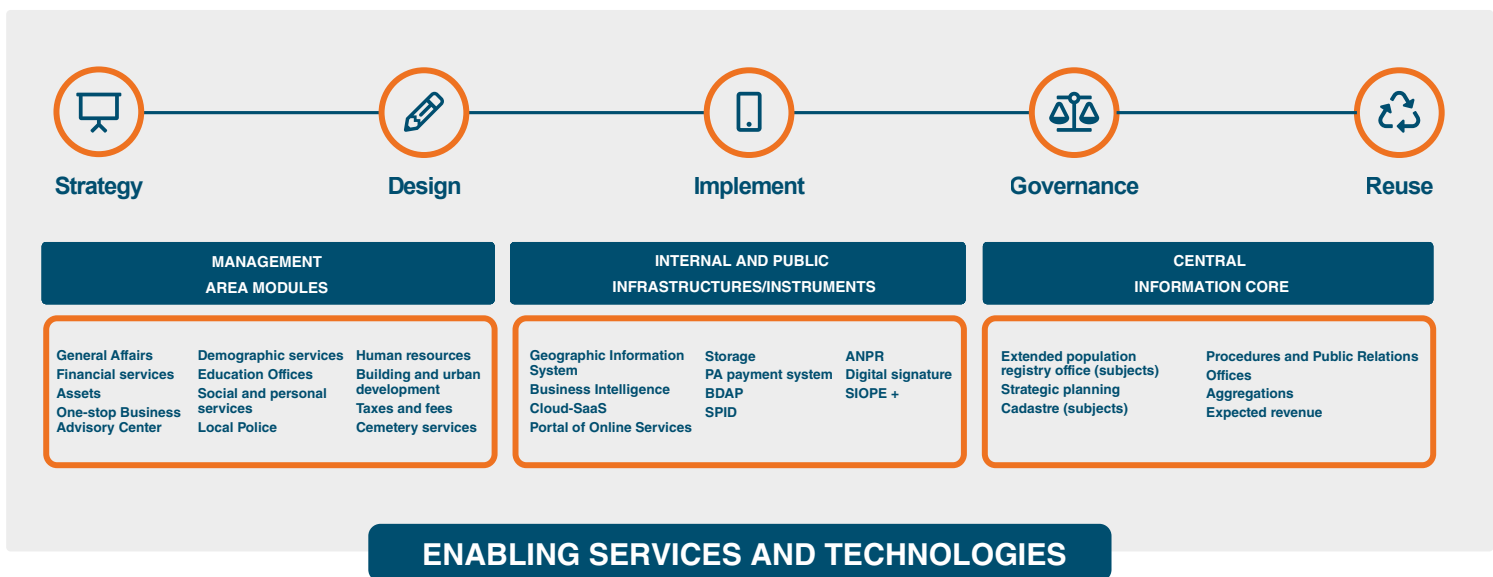

The solution is available in reuse and open source mode (according to AGID [Agency for Digital Italy] guidelines on the acquisition and reuse of software in the PA) and in Cloud mode (still according to AGID guidelines) and finally in on-premise license

ADVANTAGES

Technology and good governance

jEnte is designed to:

- ▶ **SUPPORT** Bodies in adopting a modern and functional organization focused on “objective-based” management
- ▶ **AUTOMATE** procedures both through the widespread use of workflows and the complete dematerialization of documents
- ▶ **ALLOW** full interoperability with SIT systems, Substitutive Conservation, Business Intelligence
- ▶ **GUARANTEE** online interaction with citizens, businesses and professionals
- ▶ **CREATE** a true integration and aggregation of data and logics between different management modules, overcoming sectorial management
- ▶ **SHARE** information and data between various sectors, safeguarding the independence of each
- ▶ **BUILD** advanced information management and control systems, interactions between subsystems, periodic reports with data aggregation, territorial-based statistics, in order to make a seemingly disaggregated set part of an efficient global system.

Municipia, a company of the Engineering Group, is the ideal partner for the digital transformation of about 1,000 cities of all sizes, supplying the best technologies and creating innovative services through private investments and absorption of the operational risk.

MUNICIPIA - AUGMENTED CITY AND DIGITAL TRANSFORMATION

Mission

- ▶ We manage services for Authorities and their citizens, achieving greater levels of efficiency, effectiveness, transparency and sustainability through digital technology. We intervene also with **public-private partnerships and project financing** formulas with investments and risks borne by us and participation in the benefits deriving from the increase in revenue and the decrease in costs.
- ▶ We add value to existing investments and technologies, making available our experience and the technological solutions of the Engineering Group. We intervene both with vertical initiatives and with cross-cutting projects in order to improve the quality of life in the city and to simplify the relationship between public administrations and citizens.
